

ALDER STREET DATA CENTERS
1400 Alder Street, Denver, Colorado
17 January 2019
Marcus Reyes
Cairnwell Technologies

Dear Marcus,
Further to your call of 8 January, here are the terms on which we would renew Suite C under the option in your 19 January 2017 agreement.

TERM

Five years, 1 April 2020 through 31 March 2025, exercising the option in clause 14. Written notice required not later than 30 September 2019.

SPACE AND POWER

Suite C as demised.

Committed floor 180 kW.

Ceiling 300 kW.

Neither figure changes. I know you asked whether we would require an increase and the answer is no -- we would rather renew a tenant we know at the commitment they have than push a number and start a conversation about the market.

RENT

\$136.00 per kW per month on the committed floor, year one, with a three per cent increase on each anniversary. Metered power above the floor at our published rate, currently \$0.078 per kWh, with the demand charge unchanged.

That is a little under what you are paying now. It is what the building is getting for space of this size today and I am not going to pretend otherwise -- you will have seen that there is capacity in Denver.

DISTRIBUTION WORK

We are willing to carry out the additional distribution work you and I discussed, or to permit your contractor to do it, at your cost.

Our side of it -- the feed into C and the upstream work -- we would quote separately once you tell me what density you are going to. Rough order, on what you described, eighteen to twenty-four thousand and about two weeks of our time, scheduled around the room.

We are not making the work a condition of anything and we are not offering it as an inducement.

WHAT WE ARE NOT OFFERING

You asked me to be explicit about this, so: no other suite in this building is coming available on a timescale that would suit you, we are not in a position to sell you the building or any part of it, and we do not finance tenant work. I would rather tell you that now than have you find it out in August.

Yours,

Renata Kovac
